

Test report

Test items	Coating hundred-cell test
Test object	LWW-WZB-W55-L12-RDM
Purpose of detection	To verify the paint level of LWW-WZB-W55-L12-RDM lamps
Test time	2024.11.8
Testing equipment	Tape, utility knife, soft-bristled brush, magnifying glass
Test final conclusion: LWW-WZB-W55-L12-RDM sample lamps can pass the 5B grade coating hundred-cell test requirements; The results of this experiment are only responsible for the sample results.	

Test standard: international standard

Lv.	Status Description	Appearance
5B	The edge of the line is smooth, and no paint is chipped on the edge of the line and at the crossing point.	-----
4B	There are small pieces of paint falling off at the crossing points of the lines, and the total area falling off is less than 5%.	
3B	There are small pieces of paint falling off at the edges and intersections of the lines, and the total area falling off is between 5% and 15%.	
2B	There are sheets of paint falling off at the edges and intersections of the lines, and the total area falling off is between 15% and 35%.	
1B	There are sheets of paint falling off at the edges and intersections of the lines, and the total area falling off is between 35% and 65%.	
OB	The shedding area exceeded the 1B standard	-----

Test data:

1. Record the state of the sample before the test.

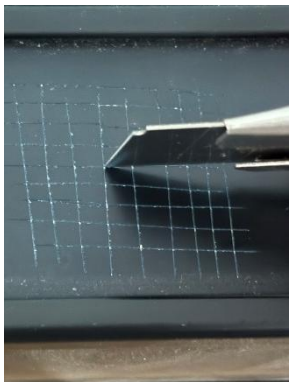

The product has a smooth and traceless surface

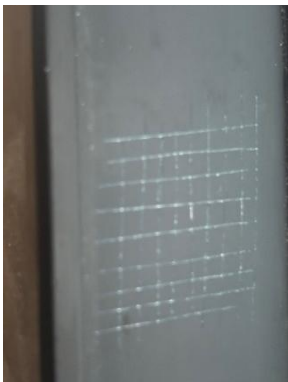

Test method:

2. Draw a line with a utility knife every 1mm interval in the area of 100mm² (the depth needs to see the substrate), cross mark 100 squares, use a brush to clean the paint surface of the square, paste it with tape or its compatible adhesive tape on the test area of the square, and then use the tape to tear away immediately and quickly in the vertical direction, the paint on the test surface shall not fall off more than 5%. After the test, use a magnifying glass to observe the paint of the lamp body and the surface of the tape

Test process:

Test results

Test results:

Through the appeal test data, it was proved that LWW-WZB-W55-L12-RDM lamps did not fall off the paint surface of the lamp body after the coating 100-cell test.
